Shower enclosures

acqua 5000

Our eternal pursuit of perfection shines through in the new acqua 5000: The clean-cut, linear design blends a sense of discreet, understated elegance together with a presence that makes itself felt. Sliding doors lend the acqua 5000 a delicate grace, and ensure the peaceful silence that a bathroom needs. Sophisticated technical touches together with impressive precision come together to create a crystal clarity and an unforgettable shower experience. The top-quality materials underscore the timeless elegance of this shining jewel of bathroom furnishings. **acqua 5000 – formed from experience, perfected in design.**

TECHNOLOGICAL HIGHLIGHTS & DESIGN

SOPHISTICATED TECHNOLOGY

AUTOMATIC CLOSE & STOP

All models are fitted with an Automatic Close & Stop system to ensure that the doors glide gently into the closed position, right down to the last inch. The new acqua 5000 also features an innovative mechanism in the inner side of the horizontal rail, circumventing the need for recessed tracking and providing a smooth, flowing surface.

HEIGHT-ADJUSTABLE BALL-BEARING ROLLERS

The height-adjustable ball-bearing rollers are tucked away in the horizontal rail, allowing the door to glide smoothly along the tracks. The height-adjustable mechanism enables adjustment to tolerance levels on-site during installation.

WALL ADJUSTMENT BY MEANS OF ADJUSTABLE GLASS

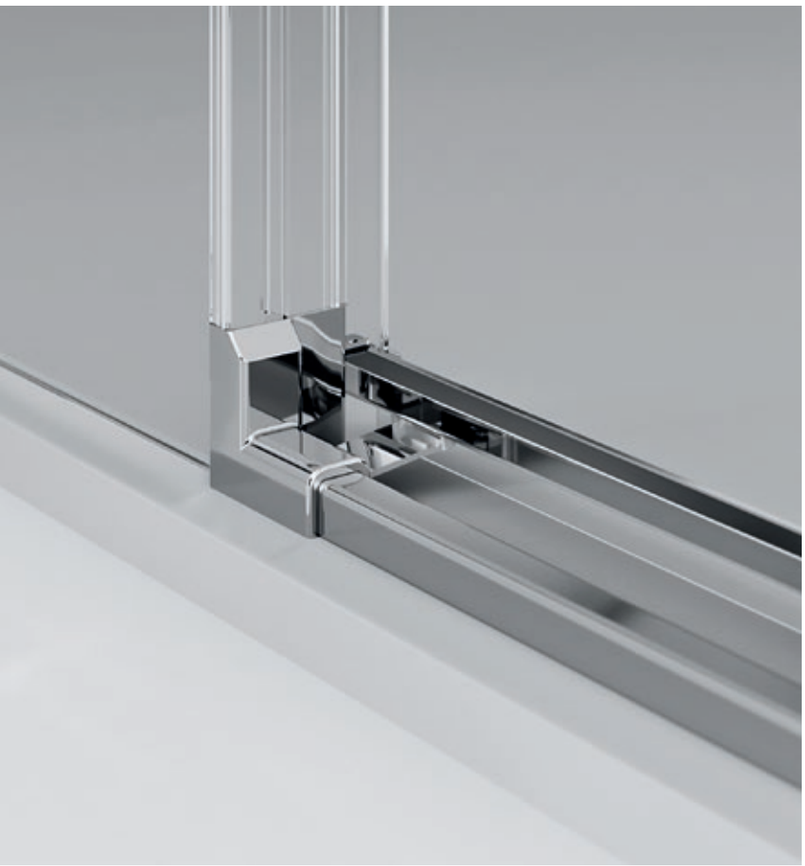
In the framed models, the glass is inserted into a wall profile and affixed by means of two adjustable screws, allowing panel adjustment of up to 25 mm. The setting does not affect the outer appearance of the glass.

UV ADHESIVE TECHNOLOGY

Many of the components are bonded directly to the glass by means of UV adhesive technology for an ultra-smooth surface that is both attractive and easy to clean.

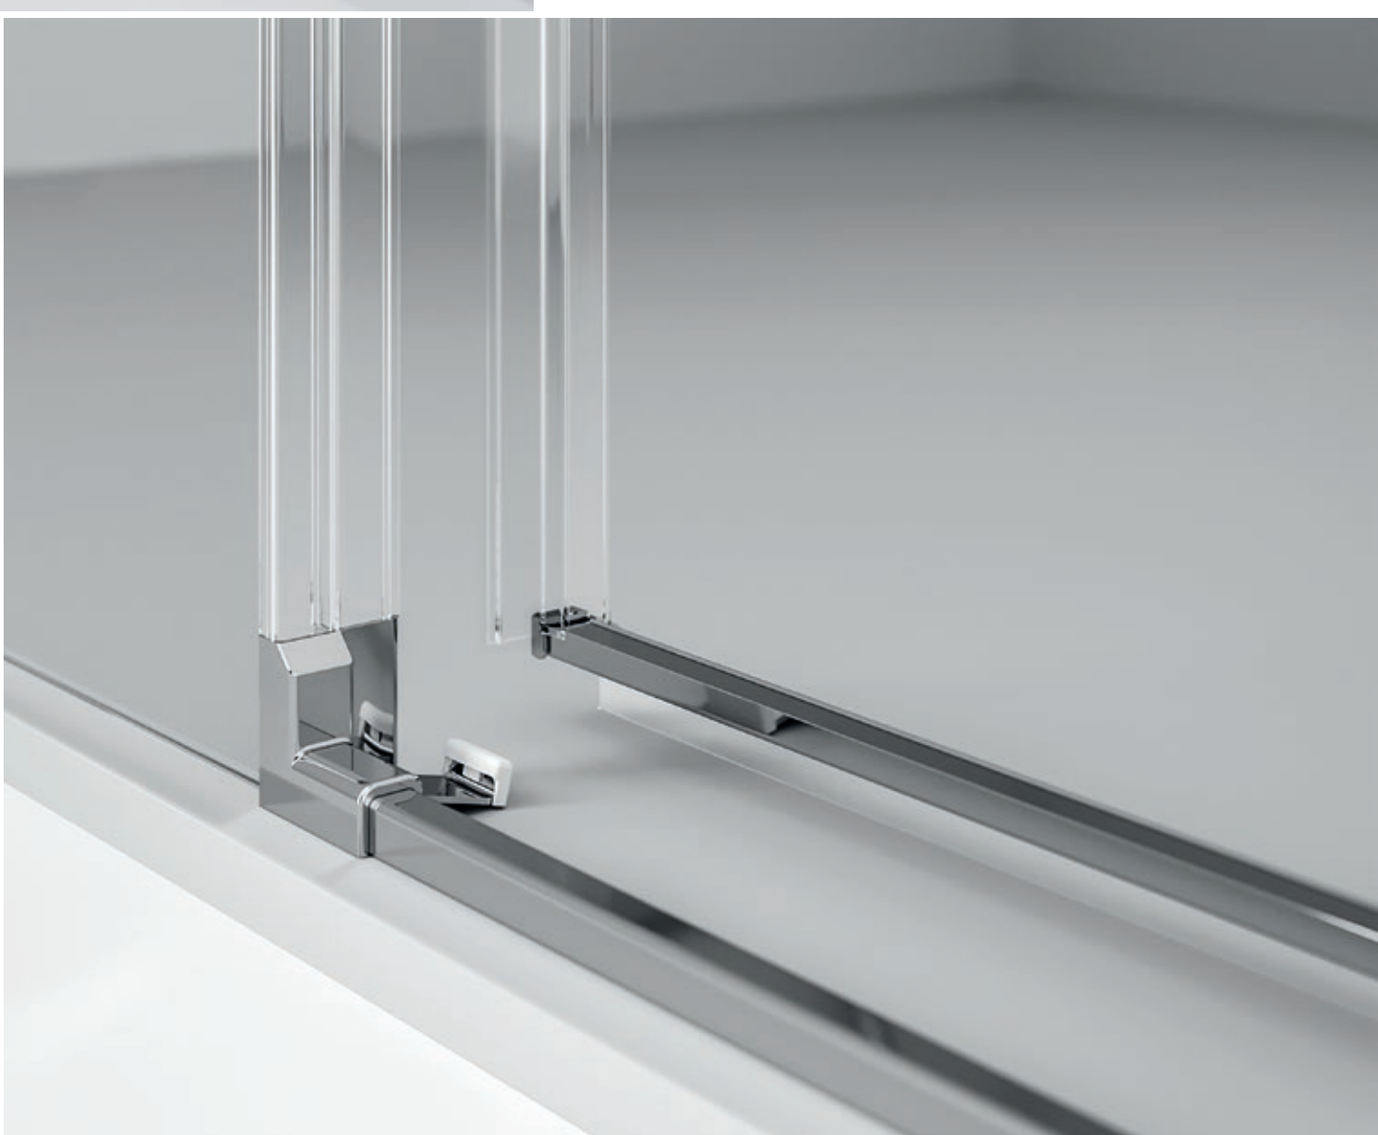
5★ SEAL SYSTEM

The new seal system provides maximum protection with minimum visibility. A slimline aluminium profile is attached to the base of the glass, with no protrusion, and is fitted with an inner PVC seal insert. As the water runs primarily down the aluminium profile, the lifespan of the PVC seal is thus considerably longer. The seal can be removed, cleaned and reattached with the greatest of ease for cleaning and replacement if necessary.



RELEASABLE SLIDING ELEMENTS

The acqua 5000 is fitted with a sophisticated swivel-release mechanism. The sliding panel can be instantly released by simply pressing gently downwards on the hook on the runner guide, ensuring outstanding ease of cleaning.



CAPTIVATING DESIGN

HANDLE

In both the single and double-panel models, the handle is integrated into the magnetic profile, maximising the entrance area and allowing for outstanding ease of cleaning. The three and four-panel models feature screw-affixed handles and, likewise, guarantee effortless opening and closure.
The inner handle has been ergonomically designed to ensure a comfortable, safe grip even with wet hands. Unobtrusive in both shape and position, this handle is the quintessence of practicality combined with beauty, placing the glass firmly centre-stage as the star of the show.

Handle of the four-panel sliding door

MAGNETIC ALUMINIUM PROFILE

The vertical edge of the glass features an aluminium profile fitted with an integrated magnetic strip for effortlessly perfect closure. This system also allows for 2 mm compensation adjustment during installation.

FLOOD PROFILE

In combination with the 5★ seal system, the flood profile guarantees an absolute watertight performance. At just 8 mm high, the profile integrates unobtrusively into any setting. If you require barrier-free entry, the profile does not have to be installed: Water spray can be reduced to a minimum by lowering the height-adjustable ball-bearing rollers.

NO OVERLAPPING

In keeping with the harmonious design, the acqua 5000 features no overlap between the fixed panel and sliding panel, thus preventing any build-up of dirt and ensuring effortless ease when cleaning.

STYLISH CONNECTION

The sliding rails of the corner entry are joined by a mitre-cut and screws, together with a discreet corner joint reinforcement. Fitted flush to the surface of the profiles, it blends in seamlessly beauty with the shower enclosure as a whole.

OBLIQUE CUT

In the new acqua 5000 corner models, no ceiling support is necessary. From widths of 1021 mm and upwards, a glass contour on the fixed panel guarantees stability. The new rounded form subtly enhances the stylish, uncluttered beauty of the shower enclosure.

VAST
GLASS VARIETY

In order to increase the scope for personalisation, we have added two new options to our range: Nubes, a clear glass with silkscreen print that fades out gradually upwards, and Parsol grey glass, available now, with anthracite Privé. Both finishings provide ample privacy while allowing light to enter. Both of these silkscreen prints add a contemporary touch and an eye-catching panache to your shower enclosure.

TG10 Parsol grey with Privé in anthracite and with anthracite silk-screen print at the upper border of the glass

VB10 Transparent glass with Nubes satin and with white silk-screen print at the upper border of the glass

You can find our full range of glasses on page 57

WALL PROFILE MODELS

The classic shower enclosure with vertical profiles will never be out of fashion. The elegant form of the profiles blends beautifully into every setting, providing you with unrestricted flexibility. Adjustable by up to 25 mm, they can be easily adapted to fit the shower enclosure even in the case of larger tolerances.

FRAMELESS MODELS

The all-glass solution with wall hinges combines outstanding transparency with unbeatable practicality. The unobtrusive design adds a distinctive grace and elegance to the shower enclosure without compromising on stability. The wall hinges feature an adjustment range of up to 8 mm to compensate out-of-plum conditions during installation.

GLASS COATING

Duka offers an innovative glass treatment, which goes by the name of “ProCare.” The treatment takes place during the production of the panels: the surface is magnetron-sputtered with metal oxides in a vacuum. The tempering process activates and fixes the coating, ensuring that water runs full and fast off the glass surface, vastly reducing watermarks and keeping your glass as good as new far into the future. ProCare is available as an alternative to Protect coating for many products.

On request, Duka shower enclosures are also available with PROTECT safety glass surface protection which guarantees high standards when it comes to use, clarity, transparency and cleanliness. Important: Do not use any abrasive cleaners or alkaline cleaning material.

Greta Rabensteiner

THE ARTIST

We look on design as art made useful. The point where
design, creativity, experience and technology come together
to create something that is unique, and special.
To highlight the exclusivity of Duka shower enclosures
we have separated the various sections
of the catalogue with the extraordinary work of young artist
Greta Rabensteiner, designed exclusively
for the relaunch of the acqua 5000.
In a unique blend of strength, energy and vitality,
each illustration encapsulates the essence
of our own works of art - Duka shower enclosures.

For technical reasons, the colours shown may differ from actual colours. Duka AG reserves the right to change its products without obligation of notification or replacement at any time. All technical specifications and detailed product information can be found at duka.it
